

Microvision MS 2200 ROV Portable Laser Scanner

The ROV MS 2200 Laser Scanner Illustrated

Incorporating the proprietary Microvision MEMS based Class I Laser scan engine. Built foremost for asset tracking and library stock taking, the Simple to operate and Affordable ROV™ Laser Bar Code Scanner caters for price sensitive data collection applications in enterprise, government and small to medium size businesses.

Powered by 3 AAA Alkaline or 3 AAA rechargeable NiMh cells (Batteries Not Included), the MS 2200 series can be remotely transported to where any stock taking code or asset data loading needs to be undertaken. The built-in 64 Kb of non volatile memory is capable of storing up to 4000 UPC-A size or similar quantity of average length asset or library bar codes for downloading to the host device as required. When not used for portable data collection operation the MS 2200 ROV can be attached to the host computer with USB HID cable (recommended) and used as a conventional bar code reader.

Bar code symbologies supported include UPC/EAN/JAN, Code 39, Code 128, RSS, Codabar, and Interleaved 2 of 5 to cater for most industrial and commercial requirements. The multi-function decoder supports RS232 serial or USB HID interfaces (cable selectable).

Designed for use in a variety of commercial, retail or industrial applications, the MS 2200 series can be supplied complete with RS232 serial I/F cable and Protective Santoprene® Boot for safe operation in a variety of environments; an optional USB HID interface cable or USB HID Docking Station are available for **Alternative Interfacing** and data downloading operation.
